Low Power Variable Optic Operators Course

This course is designed for the rifle shooter to learn the capabilities and limitations of the Low Power Variable Optic (LPVO) as an option for use on the standard patrol rifle, as well as increase confidence in effectively employing the LPVO as a primary sighting system in CQB

Participants will engage in dry fire drills and live fire training designed to increase confidence and abilities when using an LPVO system.

This is NOT a sniper or designated marksman course; however, we will learn about topics that may translate and will be beneficial to any shooters looking to improve marksmanship before stepping into a sniper or DM role.
